OSTEOPATHIC ANNALS INDEX 1975

SUBJECT INDEX

January — Chronic Diseases
February — Fascial and Ventral Techniques
March — Thoracic Outlet Syndrome
April — Osteopathic Manipulative Medicine as a Specialty
May — Diagnosis and Management of Stroke
June — Silver issue
July — Arthritis
August — Adolescent Medicine
September — Psychiatry
October — Diagnostic Radiology: Values and Hazards — I
November — Diagnostic Radiology: Values and Hazards — II
December — The Future of Osteopathic Medicine

TITLE INDEX

Acne Vulgaris. Peter J. Koblenzer, Caroline S. Koblenzer, and John F. Schmelzer, Aug., p. 9.
Acupuncture and Orthopedics. Robert W. Ho, June, p. 11.
Acupuncture — An Overview. Mathew H. M. Lee, July, p. 33.
Acute and Chronic Low Back Disorders. Gustave V. Conti, June, p. 16.
Adolescent Conflict and the Need for Psychiatric Hospitalization. Sheldon P. Wagman, Sept., p. 39.
Adolescent Obesity. Martyn E. Richardson, Aug., p. 30.
Adult-Onset Diabetes Mellitus. William D. Miller, Jan., p. 12.
Advances in Psychopharmacology. Martin B. Goldstein, Sept., p. 49.
Alcoholism and Drug Dependence, Bernard S. Sobel, Sept., p. 24.
Angiography of Thoracic Outlet Pathologies. Lewis M. Halin, March, p. 38.
Another View on Specialty Recognition for Osteopathic Manipulative Medicine. Elliott L. Hix, April, p. 36.
As We Approach the 21st Century. Otterbein Dressler, Dec., p. 28.
The Atom, the Echo, or the Pipe? Lewis M. Halin, Oct., p. 8.
Building on a Dependable Foundation. A. Hollis Wolf, Dec., p. 25.
The Cancer and Leukemia Consequences of Medical X-Rays. John W. Gofman, Nov., p. 24.
Certification in Osteopathic Manipulative Medicine. Norman J. Larson, April, p. 28.
Chronic Fatigue. Eli H. Stark, Jan., p. 42.
Community Resources for the Long-Term Treatment of the Stroke Patient and Family. Esther Spencer, May, p. 42.
Competency in Palpatory Diagnosis and Treatment. Philip E. Greenman, April, p. 18.
The Comprehensive Stroke Care Unit. Louis E. Rentz, May, p. 36.

DARVOCET-N® 100
propoxyphene napsylate with acetaminophen

Indication: For the relief of mild to moderate pain, either alone or acco
panied by fever.

Contraindications: Hypersensitivity to propoxyphene or to acetami
phen.

Warnings: *Drug Dependence*—Propoxyphene can produce drug
pendence characterized by psychic dependence and, less frequer
physical dependence and tolerance. Propoxyphene will only parti
suppress the withdrawal syndrome in individuals physically depend
on morphine or other narcotics. The abuse liability of propoxypheni
qualitatively similar to that of codeine although quantitatively less,
propoxyphene should be prescribed with the same degree of cau
appropriate to the use of codeine. *Usage in Ambulatory Patient*
Propoxyphene may impair the mental and/or physical abilities requi
for the performance of potentially hazardous tasks, such as driving a
or operating machinery. The patient should be cautioned accordin
Usage in Pregnancy—Safe use in pregnancy has not been establis
relative to possible adverse effects on fetal development. Therefore,
poxyphene should not be used in pregnant women unless, in the ju
ment of the physician, the potential benefits outweigh the possible h
ards. *Usage in Children*—Propoxyphene is not recommended for us
children, because documented clinical experience has been insuffici
to establish safety and a suitable dosage regimen in the pediatric
group.

Precautions: Confusion, anxiety, and tremors have been reported
few patients receiving propoxyphene concomitantly with orphenadr
The central-nervous-system depressant effect of propoxyphene may
additive with that of other C.N.S. depressants.

Adverse Reactions: The most frequent adverse reactions are dizzine
sedation, nausea, and vomiting. These effects seem to be more pro
nent in ambulatory than in nonambulatory patients, and some of th
adverse reactions may be alleviated if the patient lies down. Other adv
reactions include constipation, abdominal pain, skin rashes, lighthe
edness, headache, weakness, euphoria, dysphoria, and minor vi
disturbances. The chronic ingestion of propoxyphene in doses exce
ing 800 mg. per day has caused toxic psychoses and convulsions.

[011

DARVON® COMPOUND-65
propoxyphene hydrochloride, aspirin, phenacetin, and caffeine

Indication: For the relief of mild to moderate pain.

Contraindication: Hypersensitivity to propoxyphene, aspirin, phena
tin, or caffeine.

Warnings: *Drug Dependence*—Propoxyphene can produce drug
pendence characterized by psychic dependence and, less frequen
physical dependence and tolerance. Propoxyphene will only parti
suppress the withdrawal syndrome in individuals physically depend
on morphine or other narcotics. The abuse liability of propoxypheni
qualitatively similar to that of codeine although quantitatively less,
propoxyphene should be prescribed with the same degree of cau
appropriate to the use of codeine. *Usage in Ambulatory Patient*
Propoxyphene may impair the mental and/or physical abilities requ
for the performance of potentially hazardous tasks, such as driving a
or operating machinery. The patient should be cautioned accordin
Usage in Pregnancy—Safe use in pregnancy has not been establis
relative to possible adverse effects on fetal development. Therefore,
poxyphene should not be used in pregnant women unless, in the ju
ment of the physician, the potential benefits outweigh the possible h
ards. *Usage in Children*—Propoxyphene is not recommended for us
children because documented clinical experience has been insuffici
to establish safety and a suitable dosage regimen in the pediatric
group. Salicylates should be used with extreme caution in the presenc
peptic ulcer or coagulation abnormalities.

Precautions: Confusion, anxiety, and tremors have been reported
few patients receiving propoxyphene concomitantly with orphenadr
The central-nervous-system depressant effect of propoxyphene may
additive with that of other C.N.S. depressants. Phenacetin has been
ported to damage the kidneys when taken in large amounts for a l
time. Salicylates may enhance the effect of anticoagulants and inhibit
uricosuric effect of uricosuric agents.

Adverse Reactions: The most frequent adverse reactions are dizzin
sedation, nausea, and vomiting. These effects seem to be more pro
nent in ambulatory than in nonambulatory patients, and some of th
adverse reactions may be alleviated if the patient lies down. Other adv
reactions include constipation, abdominal pain, skin rashes, lighthe
edness, headache, weakness, euphoria, dysphoria, and minor vi
disturbances. The chronic ingestion of propoxyphene in doses exce
ing 800 mg. per day has caused toxic psychoses and convulsions.
